FPGA’98

1998 ACM/SIGDA Sixth International Symposium on
Field Programmable Gate Arrays

Doubletree Hotel, Monterey, California
February 22-24, 1998

Sponsored by ACM/SIGDA
with support from Actel, Altera, Xilinx and Lucent

Welcome to the 1998 ACM/SIGDA International Symposium on Field Programmable Gate Arrays (FPGA’98). This annual symposium is the premier forum for presentation of novel work in all areas related to the FPGA technology. The symposium also provides a relaxed, informal atmosphere for exchanging ideas and for stimulating discussions for future research and development in this exciting field.

FPGA’98 has experienced a growth of 30% in paper submissions compared to FPGA’97, which bears witness to the strong and still increasing general interest in this field. The technical sessions will include 25 regular papers, 22 poster papers, and an evening panel discussion. The technical papers discuss the most recent advances and ideas in all areas related to FPGAs. Each session contains papers in one narrowly defined area of research such as FPGA architectures, CAD tools, and novel applications. Many of the sessions will be followed by a poster presentation session, which includes both poster papers as well as the papers presented in the previous session. The Monday evening panel discussion will focus on the goodness measures for FPGAs from many different points of view.

We hope that you will find the symposium informative, stimulating and enjoyable. We welcome your comments and suggestions so that we can make the future symposia even better.

Jason Cong
General Chair

Sinan Kaptanoglu
Program Chair
